PERFORMANCE SPECIFICATION SHEET

```
CIRCUIT BREAKERS, MAGNETIC, PANEL SEAL,
    TRIP-FREE, SERIES TRIP, DOUBLE POLE
        (0.2 TO 30 AMPERES)
```

This specification is approved for use by all Departments and Agencies of the Department of Defense.

The requirements for acquiring the product described herein shall consist of this specification sheet and MIL-PRF-55629.

FIGURE 1. Dimensions and configurations (configuration1).

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Unless otherwise specified, tolerance is $\pm .031$ ( 0.79 mm ).
4. Lockwasher, split, No. 8 NASM35338-137 or equivalent.

5 Terminal screw, No. 8, .164-32 UNC-2A, . $187 \pm .015$ long, material: Brass, tin plated (ASTM B545 or equivalent).
6. Passivated - corrosion resisting steel screw, slotted head with integral O-ring, may be replaced by the NASM3212-12 with cross-recessed head or equivalent.
7. Hex mounting nut . 500-32 UNF-2B thread, . $625 \pm .010$ across flats, $.120 / .125$ thick, brass nickel plated, SAE-AMS-QQ-N-290 nonglare or equivalent; may be replaced with MS25082-B22 or equivalent.
8. Internal tooth lockwasher, . $625 \pm .005$ O.D., $.510 \pm .005$ I.D., $.028 \pm .005$ thick, stainless steel.
9. O-ring, material: Material shall be selected to enable the O-ring to meet the performance requirements of this specification. Butadiene acrylonitrite has been successfully used in the past and should be considered for meeting the O-ring requirements of the specification.
10. Auxiliary switch terminals shall provide for soldered connections.
11. Physical item marking of the words "LOAD" and "CB CONT OPEN" is optional.

| Y | .329 | .359 | 8.36 | 9.12 |
| Z | .095 | .125 | 2.41 | 3.18 |

NOTES:

1. Dimensions are in inches.
2. Metric equivalents are given for general information only.
3. Unless otherwise specified, tolerance is $\pm .015$ ( 0.38 mm ).
4. Lockwasher, split, No. 8 NASM35338-137 or equivalent.

5 Terminal screw, No. 8, .164-32UNC-2A, . $187 \pm .015$ long, material: Brass, tin plated (ASTM B545 or equivalent).
6. Passivated - corrosion resisting steel screw - slotted head with integral O-ring, may be replaced by The NASM3212-12 with cross-recessed head or equivalent.
7. Hex mounting nut: .500-32 UNF-2B thread, . $625 \pm . .010$ across flats, $.120 / .125$ thick, brass nickel plated, SAE-AMS-QQ-N-290 nonglare or equivalent; may be replaced with MS25082-B22 or equivalent.
8. Internal tooth lockwasher, . $625 \pm .005$ O.D., . $510 \pm .005$ I.D., . $028 \pm .005$ thick, stainless steel.
9. O-ring, material: Material shall be selected to enable the O-ring to meet the performance requirements of this specification. Butadiene acrylonitrite has been successfully used in the past and should be considered for meeting the O-ring requirements of the specification.
10. Auxiliary switch terminals shall provide for soldered connections.
11. Physical item marking of the words "LOAD" and "CB CONT OPEN" is optional.

FIGURE 2. Dimensions and configurations (configuration 2) - Continued.

## REQUIREMENTS

Dimensions and configuration: See figure 1 and figure 2.
Current ratings: See table I.
High inrush: Applies unless otherwise specified. 1/
Voltage ratings: See table II. Ratings are maximum; the minimum operating voltage is limited by the internal resistance or impedance of the circuit breaker (see table I).

Auxiliary contacts:
Contact capacity shall be 10 amperes to 250 volts $60 / 400 \mathrm{~Hz}$ and 2 amperes resistive, 1 ampere inductive to 50 V dc.

Tripping-time delays: See table I and table II.
Terminal and mounting hardware: See figure 1.
Terminals: See figure 1. Solderability is applicable to auxiliary contact terminals.
Actuator strength: 25 pounds.
Actuator operating force: 4 pounds, maximum.
Terminal strength:
Applied load: 30 pounds.
Applied torque: 10 inch-pounds.
Interrupting capacities:
2,000 amperes at 50 V dc .
2,000 amperes at $120 \mathrm{~V} \mathrm{ac}, 60 \mathrm{~Hz}$.
1,500 amperes at $120 \mathrm{~V} \mathrm{ac}, 400 \mathrm{~Hz}$.
1,000 amperes at $240 \mathrm{~V} \mathrm{ac}, 60$ and 400 Hz .
Seal: Panel seal test applies.

Part or Identifying Number (PIN): The PIN to be cataloged and stocked by the Government consists of the prefix M55629/21 and four succeeding code letters as follows: $1 /, \underline{2}$

When circuit breakers without auxiliary contacts, are installed in new equipment, replacement spares should possess this feature since it is more economical for the DoD to stock one version of this item instead of two. Therefore, stock numbers should not be requested (or assigned) for this special PIN.

1/ Special PINs for equipment manufacturers' use only. Equipment manufacturers who do not require the high-inrush feature or auxiliary contacts in specific production applications may order circuit breakers without these features by modifying the prefix as follows: M55629/21XXXX. Replace slash with A for items without auxiliary contacts (M55629A21XXXX). Replace slash with B for items without the high-inrush feature (M55629B21XXXX). Replace slash with C for items without either high-inrush feature or auxiliary contacts (M55629C21XXXX).
2/ Replace slash with $D$ for items requiring configuration 2 (M55629D21XXXX). Replace slash with $E$ for items requiring configuration 2 without auxiliary contacts (M55629E21XXXX). Replace slash with $F$ for items requiring configuration 2 without the high-inrush feature (M55629F21XXXX). Replace slash with G for items requiring configuration 2 without the high-inrush feature or auxiliary contacts (M55629G21XXXX).

3/ If both poles have identical ratings, code letters will repeat for each pole. If both poles are not identical, poles 1 and 2, respectively (see figure 1) shall be coded in ascending order of the current rating code letter. If both poles have identical current ratings but different voltage, frequency, and time delay code letters, then these code letters shall be coded in ascending order.

1/ Circuit breakers shall not trip at 100 percent rated current but must trip at 125 or 150 percent of rated current. Between 100 percent and 125 or 150 percent, they may trip. Instantaneous is defined as less than 15 milliseconds.
2/ Items without the high-inrush feature (for use in production only) are not subject to this requirement. High-inrush test shall be performed using one alternation which has a peak value of 1800 percent of rated current. 400 Hz and dc delays shall be subjected to a 400 Hz waveform, 60 Hz delays shall be subjected to a 60 Hz waveform.
3/ High and low test temperature tolerances are $\pm 2^{\circ} \mathrm{C}$.

1/ Circuit breakers shall not trip at 100 percent rated current but must trip at 125 or 150 percent of rated current. Between 100 percent and 125 or 150 percent, they may trip. Instantaneous is defined as less than 15 milliseconds.
$2 /$ High-inrush test shall be performed using one alternation, which has a peak value of 1800 percent of rated current. 400 Hz and dc delays shall be subjected to a 400 Hz waveform, 60 Hz delays shall be subjected to a 60 Hz waveform.
$3 /$ High and low test temperature tolerances are $\pm 2$ degree Celsius.

Circuit breakers covered by this specification replace commercial types as specified in table III providing they have equivalent current, voltage, frequency, and time delay ratings.

Circuit breakers without either auxiliary contacts or the high-inrush feature should be replaced by equivalently rated military items with both of these features.
